

Communicating Clearly

MODEL 94W-15 WIRELESS HEADSET SYSTEM

VIS-A-VIS, INC.

Communication for the Team

The Vitalinq 94W Wireless Headset System is a wireless communication system incorporating lightweight wireless headsets to provide discrete hands-free audio communication between physicians, nurses, technicians and other clinical team members. Ideal for electrophysiology labs, hybrid operating suites and similar environments, the single-sided wireless DECT headsets provide exceptional sound quality and are designed for all-day use with talk times as long as 12 hours on a single battery charge. Encrypted radio transmission provides maximum security for wireless communication.

As few as two and as many as nine wireless headsets can be connected to a single Vitalinq 94W console. To join the conversation, you simply remove a headset from its base station and it automatically links. A mute switch is conveniently located on the headset which can be toggled on and off. Additionally, if more than 9 headsets are needed for a lab, consoles can be “daisy-chained” together. Vitalinq 94W consoles may also be connected to the Vitalinq 94A Intercom and Music System console.

Key Features and Benefits

- Durable powder coated aluminum console
- Roaming range up to 120 m / 400 ft from base
- Light weight 3.7 oz monaural headset (binaural available upon request)
- Easily adjustable universal fit headband
- Up to 12 hours of talk time
- Fast charging with indicator on base station
- Encrypted radio transmission provides secure conversations
- Noise-canceling microphone provides exceptional speech intelligibility
- Narrowband or wideband up to 6,800 Hz
- DECT protected frequency band prevents WIFI network interference
- Power strip with nine outlets for console and up to eight headsets
- Power strip plugs into any available AC outlet
